

The Algorithm

With this algorithm, it is possible to use the primary ID to search through the records by row. To be able to include the path in our algorithm, we used this procedure below.

Steps to Read CSV Files in python Using csv.reader

- 1. Import the CSV library. import csv.**
- 2. Open the CSV file. The. open() method in python is used to open files and return a file object.**
- 3. Use the csv.reader object to read the CSV file. csvreader = csv.reader(file)**
- 4. Extract the row using the primary id number.**

We got an inspiration from this websites;
